## Ytria viewEZ

*Put an end to time-wasting repetition in view development*

- > Total view and column analysis
- > Faster development and troubleshooting for views and columns
- > Extends the power of Domino Designer

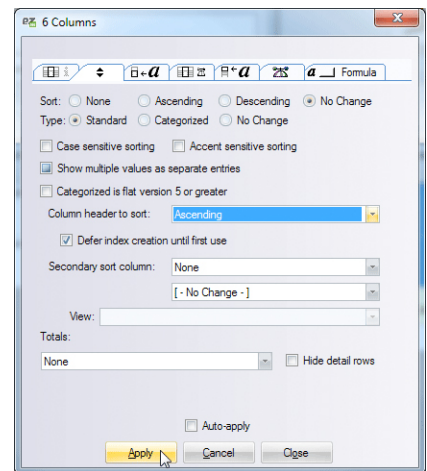

Views are essential to any Notes application as they let you see documents and provide much-needed context. A well-designed view is one of the hallmarks of a great application.

For all their usefulness, Lotus Notes views are frequently a major headache for developers. Any updates must be performed manually, one-by-one. And even basic cosmetic changes (like changing the colors of a number of views to meet corporate identity requirements) can require hours or even days of painstaking tedious repetition to complete. What's more, the need to perform all these repetitive manual tasks tends to introduce human error to the process of Notes development. Ytria viewEZ is a solution for faster Notes development.

### A tool for faster Notes development

Ytria viewEZ is a solution for faster Lotus Notes development. Here's what it lets you do:

- Get a consistent, professional look and feel for all your Notes database views in minutes
- Enhance the end-user experience by ensuring relevant columns are available where needed
- Dramatically speed up development and maintenance for Notes applications
- Expand your development capabilities—take advantage of practical features that are not part of the standard Domino® Designer toolset

**Verify and mass-edit column properties**
